

## DISEASE MODELS

BSL4	In Development										
BSL3	African swine fever virus										
	Chronic wasting disease*										
	Influenza										
	Japanese encephalitis virus										
	Middle East respiratory syndrome										
	Mpox virus										
	<i>Mycobacterium tuberculosis</i> complex										
	<i>Mycoplasma mycoides mycoides</i>										
	<i>Pasteurella multocida</i> ***										
BSL2	SARS-CoV-2										
	<i>Actinobacillus pleuropneumoniae</i>										
	<i>Bordetella</i> spp.										
	<i>Borrelia burgdorferi</i>										
	Bovine viruses (BHV-1, BLV, BVDV)										
	<i>Campylobacter jejuni</i>										
	<i>Clostridium perfringens</i> types A and C										
	<i>Escherichia coli</i> (STEC, APEC, F41)										
	<i>Fusobacterium necrophorum</i>										
	Human parainfluenza virus 3										
	Infectious bursal disease virus										
	Influenza										
	<i>Lawsonia intracellularis</i>										
	<i>Mannheimia haemolytica</i>										
	<i>Mycobacterium paratuberculosis</i>										
	<i>Mycoplasma</i> spp.										
	Respiratory syncytial virus										
	<i>Rhodococcus equi</i>										
	<i>Salmonella</i> spp.										
	Scrapie										
	STIs ( <i>Neisseria</i> , <i>Chlamydia</i> )										
<i>Staphylococcus aureus</i>											
<i>Streptococcus</i> spp.											
Swine viruses (PEDV, PCV, PRRSV)											
Zika virus											

\* Risk group 2+ working in Level 3 Containment, \*\* Cotton rat and/or golden hamster and/or rat and/or mouse, \*\*\* Serotypes B and E Models currently in development ●
